

Exercise Description: Treasure in the Tomb

Treasure in the Tomb helps develop word analysis and organization and focus skills. Using both auditory and visual clues, the participant must match pronounced words with written and spoken words.

Treasure in the Tomb pronounces a word and then presents a set of phonologically similar written words (that are also pronounced). From the set of written (and pronounced) words, the participant chooses the word that matches the original pronounced word.

Treasure in the Tomb also helps develop phonological awareness and working memory by requiring the participant to remember the sound of the words (that are paired with phonologically similar words) in order to find the matching word.
