

# Sizing

- Provide writing paper that is smaller than traditional grade width to support the child's fine motor control and performance and not require him/her to make muscular excursions through a longer range that results in a sacrifice of his/her legibility as well as contributes to his/her muscular fatigue.
- If the child writes too big to fit in blanks of worksheets – Verbally cue them to form letters slightly larger than typed text.
- Provide the size of lined writing paper that best fits the child's writing style/size.
- Practice dividing letters up according to size (short, tall, descenders).

# Sizing

- Provide adapted paper to continue success with sizing and placement of handwriting.
- Use boundaries when cuing alignment and letter size:
  - Wikki Stix.
  - Ruler for bottom and/or top lines.
  - Highlighted or bold lines.
  - Paper with clear line boundaries.
